

Propagation Section Grower, Gulley Greenhouse, Ft. Collins, CO

Job Description:

Looking for a motivated leader with strong horticulture background to manage our propagation greenhouses. This is a key role in our Young Plant Department, ensuring uniform rooting and quality of all unrooted cuttings and tissue culture during a critical stage in production. We're looking for a candidate who has a keen eye for detail, strong organizational skills, and the ability to collaborate with team members and other departments. The person in this position works very closely with our production and moving teams, so strong communication skills are essential.

Responsibilities:

Oversee the early stages of growth of cuttings and tissue culture in four propagation greenhouses, and two vertical growth chambers

Detailed space planning, and organizing batches based on environmental and specific plant requirements

Apply rooting hormones as well as plant growth regulators and fungicides as needed

Flag plants as they are rooted and ready to be moved out of propagation. Work with the moving crew to prioritize sensitive plants

Keep propagation greenhouses sanitized and free of disease and algae

Ability to work in a high humidity environment in warm temperatures

Willingness to move trays, stick cuttings, or assist other growers with watering

Willingness to conduct trials and experiments on "tough to propagate" plants

Grow finished/ bedding crops when greenhouses transition to finished/ bedding production in the Spring. Apply insecticides, fungicides and plant growth regulators as needed.

Preferred Experience:

Degree in horticulture, or experience working in a commercial greenhouse setting

Strong plant identification skills

Familiarity with Microsoft Excel and Word

Salary: Starting at \$41,000/ year (\$20.00/hr) depending on experience

Benefits: Health Insurance, Paid Vacation, Sick Time, Simple IRA with employer contributions
